PROFESSIONAL SUMMARY

Java Backend Developer with ~4 years at Infosys building event-driven microservices with Java 17, Spring Boot 3 and Apache Kafka for the Income Tax Department. Sole developer and maintainer of a Kafka-driven intimation service delivering 3-5 lakh emails/SMS per day across 72 communication types, with 8 crore+ (80M+) messages sent and a 15 crore (150M) campaign in progress. Strong in REST APIs, SQL (PostgreSQL/MySQL/Oracle), JUnit/Mockito testing, Git and Docker.

TECHNICAL SKILLS

Languages: Java 17, Java 11, SQL, JavaScript, TypeScript
Frameworks: Spring Boot 3, Spring MVC, Spring Security, Spring Data JPA, Hibernate, REST APIs, Microservices, JWT
Frontend: Angular, HTML5, CSS3, Bootstrap
Core: Data Structures & Algorithms (100+ LeetCode problems solved), OOP, Multithreading & Concurrency, Collections, Design Patterns
Messaging & Caching: Apache Kafka, Redis (Caching), SMTP, Gupshup SMS
Databases: PostgreSQL, MySQL, Oracle SQL, Flyway
Tools/DevOps: Git, Maven, Docker, Docker Compose, Jenkins, GitHub Actions, JUnit 5, Mockito, Postman, Swagger/OpenAPI, Jira, AWS (basics)

PROFESSIONAL EXPERIENCE

Technology Analyst | Infosys, Bengaluru Nov 2022 - Present
Project: Income Tax Department (Government of India)

- Solely built and maintain a Kafka-driven intimation microservice (Java, Spring Boot) that sends taxpayer emails via SMTP and SMS via Gupshup, delivering 3-5 lakh messages/day and 8 crore+ (80M+) messages to date; currently processing a 15 crore (150M) campaign.
- Implemented 72 email/SMS communication types (intimations, PAN validation updates, dues-pending notices) using reusable HTML templates within a single event-driven pipeline.
- Built a PDF print service that converts JSON payloads into intimation PDFs from JavaScript templates; PDFs are attached to emails and used for postal dispatch.
- Developed a cron-based retry service that automatically reprocesses failed email and SMS deliveries, and a failed-PDF recovery service that detects, regenerates and resends failed PDFs.
- Created an SMTP bounce-classification service that stores failed deliveries with categorized reasons (e.g. mailbox full, invalid address) and selectively resends recoverable cases.
- Own the services end to end: design, REST API development, SQL, unit testing, and releases through SIT, UAT and production with QA and client teams.

PROJECTS

OrderFlow Service - Event-Driven Order Processing | github.com/Mohangab/orderflow-service
Tech: Java 17, Spring Boot 3, Apache Kafka, PostgreSQL, Flyway, Docker Compose, GitHub Actions

- Designed an order microservice using the transactional outbox pattern so order rows and Kafka events commit atomically, avoiding dual-write inconsistencies.
- Built an idempotent consumer with per-order partition keys, retries with a dead-letter topic and optimistic locking; 35 tests incl. embedded-Kafka integration tests.

TaskFlow - Secure Task Manager | github.com/Mohangab/taskflow-api
Tech: Java 17, Spring Boot 3, Spring Security, JWT, JPA, PostgreSQL, Angular 19, Docker

- Built a REST API with stateless JWT authentication, BCrypt hashing and USER/ADMIN role-based access control, documented with Swagger/OpenAPI.
- Delivered an Angular 19 front end with route guards and JWT interceptor; shipped via multi-stage Docker build and Docker Compose with PostgreSQL.

WalletFlow API - Digital Wallet Backend | github.com/Mohangab/walletflow-api
Tech: Java 17, Spring Boot 3, PostgreSQL, Redis, JWT, Docker, GitHub Actions

- Built a wallet API for deposits, withdrawals and P2P transfers on a double-entry ledger, with idempotency keys and ordered row locks for safe concurrent transfers.
- Added rotating refresh tokens and Redis rate limiting; 76 tests run in GitHub Actions CI, including a 400-transfer concurrency test.
